

Sectioning commands with critical notes in parallel pages

This file provides examples for using the sectioning command with `reledpar`. The section titles are in the line numbering, and have critical notes.

The left and right sides are put in parallel pages. Following the standard behavior of `reledpar`, only the left titles are put to the table of contents.

We use the `\reledxxx` commands, each of them in their own `\pstart . . . \pend` group.

Page breaks are manually added before chapter with `\beforeeledchapter`.

Chapter 1

Preamble

A chapter outside any parallel typesetting environment.

Chapter 2

Left chapter

I use git to manage some packages. I would like to add a pre-commit hook, to check if I have forgotten For now, I have a minimal pre-commit, which tests only the blank spaces at ends of lines, but not the forgotten.
